

PENKO Speed Wheel Kit

Speed wheel

The speed wheel measures the speed at the underside of the weighing section to ensure accuracy of the complete weighing system. The encoder and the wheel together are the **Speed wheel**. The speed wheel assembly mounts direct to the fixed side of the weighing frame.

The encoder and the wheel produce 1000 pulses/meter (1 pulse/mm). This makes it easy to connect to any system.

Specifications

Speed wheel diameter	159.15 mm (500 mm circumference)
	25 mm width
Wheel material	Plastic with Hytrel TPE-E surface

Encoder data

Pulse count encoder	500 pulses per rotation (ppr)
Operating voltage	24Vdc
Operating temp	-20°C to +85°C at 24 Vdc

Part

Part	Part.no.
Mounting brackets	7600A3061
Speed wheel kit	7600A1778
Junction box for speed wheel	7600A1677
