Manual:

SGM800 Digitizer

IMPORTANT SAFETY INFORMATION

READ THIS PAGE FIRST!

Penko Engineering manufactures and tests its products to meet all applicable national and international standards. It is vital that this instrument is correctly installed, used, and maintained to ensure it continues to operate to its optimum specification.

The following instructions must be adhered to and incorporated into your safety program when installing, using, and maintaining Penko products. Failure to follow the recommended instructions can affect the system's safety and may increase the risk of serious personal injury, property damage, damage to this instrument and may invalidate the product's warranty.

• Read the instructions fully prior to installing, operating, or servicing the product. If this Instruction Manual is not the correct manual for the Penko product you are using, call 0031(0)318-525630 for a replacement copy. Keep this Instruction Manual in a safe place for future reference.

• If you do not fully understand these instructions, contact your Penko representative for clarification.

• Pay careful attention to all warnings, cautions, and instructions marked on and supplied with the product.

• Inform and educate your personnel about the correct installation, operation, and maintenance procedures for this product.

• Install your equipment as specified in the installation instructions of the appropriate Instruction Manual and as per applicable local and national codes. Connect all products to the proper electrical sources.

• To ensure correct performance, use qualified personnel to install, operate, update, program, and maintain the product.

• When replacement parts are required, ensure that qualified technicians use replacement parts specified by Penko. Unauthorized components and procedures can affect the product's performance and may affect the continued safe operation of your processes. The use of non-specified 'look-alike' substitution parts may result in the risk of fire, electrical hazards, or improper operation.

• Ensure that all equipment doors are closed and protective covers are in place, except when maintenance is being performed by qualified persons, to prevent electrical shock and personal injury.

WARNING
ELECTRICAL SHOCK HAZARD

Installing cable connections and servicing this instrument require access to shock hazard level voltages which can cause death or serious injury.

Disconnect separate or external power sources to relay contacts before commencing any maintenance.

The electrical installation must be carried out in accordance with CE directions and/or any other applicable national or local codes.

Unused cable conduit entries must be securely sealed by non-flammable blanking plates or blind grommets to ensure complete enclosure integrity in compliance with personal safety and environmental protection requirements.

To ensure safety and correct performance this instrument must be connected to a properly grounded, three-wire power source.

Proper relay use and configuration is the responsibility of the user.

Do not operate this instrument without the front cover being secured. Refer any installation, operation or servicing issues to qualified personnel.

Table of Contents

1 Mounting the indicator

The indicator is designed to be mounted on 35mm DIN rail. For adequate heat dissipation 30mm of space above and below the indicator are advised. More space may be necessary for cables and connectors.

2 First use of indicator

2.1 Indication of Display

With cover closed

1. Weigher stable
2. Zero active
3. Tare active
4. Output active 1-4[1]
5. Weigher value
6. Profinet BUS state[2]

With cover opened

1. key 1 press <2sec.= 1 SHORT
   key 1 press >2sec.= 1 LONG
3. key 2 press <2sec.= 3 SHORT
   key 2 press >2sec.= 3 LONG

2. key 2 press <2sec.= 2 SHORT
   key 2 press >2sec.= 2 LONG

---

[1] When Multi-range or Multi-interval is enabled, the LED's status is different and described in paragraph 2.3.
[2] Only for SGM860

MANUAL SGM800

2.2   Explanation of front keys

All keys have different functions depending if you are in weighing or
menu mode.

1 SHORT
Pressing key 1 "short".
In Weighing mode: create a new zero level.
In Menu mode: increase value by 1 or move up in menu.

1 LONG
Pressing key 1 "long".
In Weighing mode: reset zero level to the original zero level.
In Menu mode: decrease value by 1 or move down in menu.

2 SHORT
Pressing key 2 "short".
In Weighing mode: set/ reset tare and reset preset tare.
In Menu mode: go into sub-menu or move cursor 1 position to the left.

2 LONG
Pressing key 2 "long".
In Weighing mode: set preset tare.
In Menu mode: move cursor 1 position to the right.

3 SHORT
Pressing key 3 "short".
In Weighing mode: enter menu.
In Menu mode: escape move back in menu without saving changes.

3 LONG
Pressing key 3 "long".
In Weighing mode: enter configuration menu. In
Menu mode: Confirm made changes.

Menu will jump back one level every 30 seconds of inactivity.

2.3 Multiple Range and Multi-Interval modes

There are three parameters in the configuration software (see paragraph **Fout! Verwijzingsbron niet gevonden. Fout! Verwijzingsbron niet gevonden.**) to modify the behavior from Multiple Range and Multi-Interval. The three parameters are listed in the table below.

Parameter	Value(s)
Range	Range size as integer
Max step	1, 2, 5, 10, 20, 50, 100, 200, 500
Mode	Multiple-Range, Multi-Interval

The output LED's are used to show the active range for both ranges when a range of more than 0 parts and Certified mode are selected. The output LED's are used to show the active interval as described below.

1	2	3	4	e1
1	**2**	3	4	e2
1	**2**	**3**	4	e3
1	**2**	**3**	**4**	e4
1	**2**	**3**	**4**	e5
1	2	**3**	**4**	e6
1	2	3	**4**	e7
1	2	**3**	4	e8
1	**2**	3	4	e9

MANUAL SGM800

2.3.1 Normal Operation

To use the instrument in normal operation, without multiple-range or multi-Interval, set the range to 0 parts.

2.3.2 Multiple-Range

With these settings the weight indicator swithches to a lower display resolution depending on the GROSS weight on the scale. The multi-range mode can be enabled by setting the mode to "Multiple-Range" and in field 'range' the number of display parts. Then choose the preferred max step size by selecting an option in the dropdown menu. The default value is 50.

2.3.3 Multi-Interval

With these settings the weight indicator adjusts its display resolution up and down depending on the NET weight on the scale. The multi-interval mode can be enabled by setting the mode to "Multi-Interval" and in field 'range' the number of display parts. Then choose the preferred max step size by selecting an option in the dropdown menu. The default value is 50. Make sure the preset tare value is not higher then range 1.

Note: To calculate the maximum preset tare the following formula can be used. Make sure that the step size set at initialization is used.
preset tare = range * step size

2.4   Configuration menu structure-

- - - Fun	setpoint function settings (not for SGM810 or controller)
- - - ACn	setpoint action settings (not for SGM810 or controller)
- - - dAC	Analog output settings
- - - 485	Local bus communication settings (RS485)
- - - Eth	Ethernet settings (SGM820 only)
- - - CAn	Can bus port settings (SGM830 only)
- - - - Pb	Profibus settings (SGM840 only)
- - - 232	RS232 port settings (SGM850 only)
- - - 422	RS422 port settings (SGM850 only)
- - - Ind	Indicator settings
- - - rng	Multi range/interval settings
- - - FIL	Filter settings
- - - dSF	Digital filter settings
- - - PCL	Pre-calibration settings
- - - CAL	Calibration settings
- - - tCL	Theoretic calibration
- - - gCL	Geographic calibration
- - - CLo	Date and time configuration
- - - rcL	Recall
- - - SoF	Firmware update

PENKO
an ETC Company

2.5   Display indication at startup

Turn the indicator on by connecting it to the power supply. A

series of display will appear:

8.8.8.8.8.8   **Display test.** All LED will turn on to confirm that the device display is functioning correctly.

820Eth   **Model Name.** This shows the model name of the device (in this case a SGM820 Ethernet).

1.3.1.9.0.5   **Software version.** This is the software version installed in the device.

-0005-   **Software update counter.** The number of times that the software of the device is updated.

tA.0004   **TAC code.** The Traceable Access Code is the counter that keeps track how many times indicator setting are changed.

CA.0002   **CAL Code.** The Calibration code is the counter that keeps track how many times the calibration setting is changed.

dEL.148   **Delay time.** The delay time is warming up. This is needed for certification. The counter will count back from 180 to 0.

MANUAL SGM800

2.6   Weigher settings-

Set up the correct indicator setting (step size and decimal point position).

Turn the indicator on by connecting it to the power supply.

Press key 3 for >2 sec. to get in to **Configuration Menu**.

    ‐ ‐ ‐ F u n   ‐ ‐ ‐ d A C

(In SGM810 or controller)

Go to the Indicator parameters pressing key 1 <2 sec.

    ‐ ‐ ‐ I n d

Go into the Indicator parameters pressing key 2.

    I n d   1

Use **Ind 1** to set the **maximum net weight value**. Set maximum load to prevent overload by the user. The indicator will not show any weight above the filled in value. Range: 0 – full display.

To change the value, press key 2 <2 sec.

I n d   1

Use key 1 and 2 to change the value. Key 1 is for changing the number (1-9), key 2 is for changing the position of the cursor. Confirm by pressing key 3 for >2 sec.

  Up   Down   Left   Right   Confirm

When the maximum net weight value is set successfully, the following screen is visible:

I n d   2

MANUAL SGM800

Display step size

Press key 1 <2 sec. untill you see **Ind 5** and press key 2 <2 sec.

Use **Ind 5** to set the **display step size**. The step size defines the scaled parts of the weight value. The display value will be rounded off to the nearest value with a valid step size.

Use key 1 to select the correct step size.
Choose between 1, 2, 5, 10, 20, 50, 100, 200, 500 and confirm by pressing key 3 for >2 sec.

| Up | Down | Confirm |

Done successfully, the following screen is visible:

Decimal point

To set the **Decimal point position**, enter **Ind 6** by pressing key 2 <2 sec.

The following screen is visible:

MANUAL SGM800

Press key 1 to define the point position and confirm by pressing key 3 for >2 sec.

| 1 SHORT | 1 LONG | 3 LONG |
| Left | Right | Confirm |

Done successfully, the following screen is visible:

Press key 3 <2 sec to go back to **Configuration Menu.**

Press key 3 <2 sec to go back to **main weigher display.**

2.7   Calibration

Press key 3 for >2sec. to get in to **Configuration Menu**.

   `- - - F u n`   `- - - d A C`

(In SGM810 or controller)

Go to the Calibration parameters by pressing key 1 <2 sec. until you see **- - - CAL**

   `- - - C A L`

Check and delete calibration points.

To enter the Calibration settings, press key 2 <2 sec.

`- - - C A L`

The following screen is visible:

`C A L    1`

Press key 1 <2 sec. to go to **CAL 3** and press key 2 <2 sec.

   `C A L    3`

Use **CAL 3** to **check and delete all existing calibration points**. Step through the calibration points
with key 1. Delete a calibration point by pressing
key 3 >3 sec.

Up   Down   Delete

During deletions, the following screen is visible:

MANUAL SGM800

When a number is shown, the deletion of one calibration point is completed and more points need to be deleted. Press key 3 >3 sec to do so.

 >3 sec.
When all calibration points are deleted, the following screen is visible:

Entering new calibration points.

Use key 1 <2 sec. to go to **CAL 1** and press key 2 <2 sec.

After entering, the following screen is visible:

And will automatically jump to:

First calibrate the **zero point (CP1)**. Make sure the weigher is unloaded and press key 3 >2 sec.

MANUAL SGM800

The indicator now shows CP2 to calibrate the **gain point (CP2)**.

-[P2--

And will automatically jump to:

000.000

Use key 1 and key 2 to enter the reference value. Key 1 is used for changing the number (1-9), key 2 is used for changing the position of the cursor. Load the weigher with the reference value and press key 3 >2 sec.

1 SHORT	1 LONG	2 SHORT	2 LONG	3 LONG
Up	Down	Left	Right	Confirm

Done successfully the following screen is visible:

CAL   2

Press key 3 <2 sec. to go back to **Configuration Menu.**

3 SHORT

Press key 3 <2 sec. to go back to **main weigher display.**

3 SHORT   0.000

2.8 PI Mach II software

The SGM can also be configured for first use by using PI mach II software.

Download Penko Suite from the PENKO website (http://www.penko.com/db/downloads/) and install Penko Suite. The following items will be installed:

*Pi Mach II	Program Interface to configure all Penko devices
*Job Manager XE	Version Control System for Pi Mach II projects
*Drivers	USB drivers for latest series Penko devices
*Manuals	Product manuals and protocol descriptions

After installing, connect the SGM800 to
the computer using an A-B USB cable.

Start Pi Mach II.

PiMach2.exe
The SGM800 will be found and connected. This is shown in the status bar (lower left corner).

ACTIVE USB   USB open

If there appears a USB error, connect the device manually:
Go to Environment - Communication

Environment | View | Tool
Communication
Backup Device
Restore Device

PENKO
an ETC Company
MANUAL SGM800

The following screen appears:
In the Usb tab sheet click Discover, select the SGM800 Digitizer and click OK. If this doesn't work, make sure other USB devices like mobile phones are disconnected from the PC.
In case of Windows 8, a USB driver manual is available in the Penko Suite.

In the communication setup it's also possible to connect the SGM820 through Ethernet. Set the IP-address of the SGM820 in range with the PC (see chapter 6.5 of this manual) and fill in the IP-address in tab "Ethernet".

When communication is established go to Manage.

The following tree is shown:
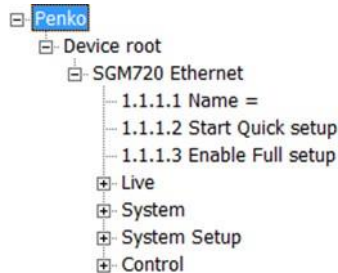

MANUAL SGM800

Go to Start Quick setup and click the button:

The following tree is shown:

Use step 1 to set the Weigher Parameters:

The settings you can make are:

Unit: set the weigher unit (kg, lbs, T, etc.) this will be shown in PI. **Decimal point:** Set the decimal point to show the correct weigher value. **Step:** Choose between 1, 2, 5, 10, 20, 50, 100, 200, 500

Maxload: Set maximum load to prevent overload by the user. The indicator will not show any weight above the filled in value. Range: 0 – 999999.

MANUAL SGM800

Use step 2 to select the type of indicator:

| Class: Penko.Quick Setup.Step 2, Indicator setup |
| Path: 1.1.2 |

| Application | Unknown |

Set the type of weighing the SGM will be used for.

This will automatically set the most common filter settings to get a stable weigher signal. The options are: Unknown, Standard indicator, Fast indicator, Silo, Platform, Belt slow, Belt fast, Filling slow, Filling fast, Checkweigher slow or Checkweigher fast.

Use step 3 to calibrate the indicator:

| Class: Penko.Quick Setup.Step 3, Calibrate |
| Path: 1.1.3 |

Live gross	cccccc kg
Live signal	6,1604 mV
Scale empty	0,000 kg
	Calibrate scale empty
Enter load on scale	0,000 kg
	Calibrate load on scale

First make sure the weigher is empty and press :   **Calibrate scale empty**

Put a reference weight on the weigher and fill in the weight: 0,000

And confirm by pressing: **Calibrate load on scale**

MANUAL SGM800

Use step 4 to set the communication (different for every type):

SGM820 (Ethernet):

Here you can set:

Name: here you can give the SGM820a name. Example " platform 1" .

Address: set the IP-address for the SGM820.

Mask: set the subnetmask for the SGM820.

Gateway: set the Gateway for the SGM820.

DHCP: Disable/enable DHCP. When enabled the SGM820 will generate an IP-address for itself.

SGM840 (PROFIBUS):

Here you can set:

Address: Set the Profibus address of the SGM840

Format: Set the format of the values sent over Profibus (Integer or Floating Point)

SGM850 (Serial):

Here you can set (for both RS232 and RS422):

Protocol: Set the Protocol that is used on the serial port. Options are: None, Printerm ASCII, NPV Slave, Modbus RTU, Modbus ASCII.

Address: set the address of the SGM850 on the communication bus.

Stopbits: set the stopbits of the SGM850 on the communication bus.

Paritiy: set the parity of the SGM850 on the communication bus. Options are: None, Odd, Even, Mark, Space.

Baudrate: set the speed communication of the SGM850. Options are: 1200, 2400, 4800, 9600, 19200, 38400, 57600, 115200.

Indicator: Set the Indicator that is sent out over the communication bus.

SGM860 (Profinet):

There are no settings to configure.

Use Done to finish the quick setup. Click End Quick setup:

Click Enable Full setup to gain access to all settings (optional):

The following tree is shown and gives access to all settings:

3   Main Menu

*In the Main menu you can change the **Setpoints** (this option is not available in the SGM810 or controllers), display the **TAC** code and display the **CAL** code.*

Setpoints. (this option is not available in the SGM810)

The SGM800 has four outputs that can swithch on/off on different levels.
These levels have to be filled in at the setpoint menu.

Press key 3 <2 sec. to go into the **Main menu**.

Press key 2 <2sec. to the setpoint change menu.

Press key 1 <2 sec. to select a different setpoint (1-4). Press key 2 <2 sec. to change the selected setpoint. Key 1 is used for changing the number (1-9), key 2 is used for changing the position of the cursor. Press key 3 >2sec. to confirm.

Up	Down	Left	Right	Confirm

When the selected setpoint is changed, the display changes to the next setpoint.

MANUAL SGM800

When done with changing the setpoints press key 3 <2 sec to go back to the
main weigher display

 0.000

TAC code (Traceable Access Code).

The SGM800 has a TAC code inside. TAC code is number of times the indicator data is changed. When an indicator gets certified this number will be written on the device and is used by the controlling agency to see if the settings aren't changed after sealing.

To check out the **TAC code** Press key 3 <2 sec. to go into the **Main menu**.

 - - 5 E t P

Press key 1 <2sec. to the **dtAC** menu and press key 2 <2sec. to enter.

 - - d t A C

The following screen will show the actual TAC code.

[0 0 0 0 0]

Press Key 3 <2 sec. to go back to the **main menu**.

 - - d t A C

Press key 3 <2 sec. to go back to the **main weigher display**.

 0.000

MANUAL SGM800

CAL code (Calibration counter).

The SGM800 has a CAL code inside. CAL code is the number of times the calibration is changed. When an indicator gets certified this number will be written on the device and is used by the controlling agency to see if the settings aren't changed after sealing.

To check out the **CAL code** Press key 3 <2 sec. to go into the **Main menu**.

 - - 5 E Ł P

Press key 1 <2sec. 2x to the **dCAL** menu and press key 2 <2sec. to enter.

 - - d C A L

The following screen will show the actual CAL code.

C 0 0 0 0]

Press Key 3 <2 sec. to go back to the **main menu**.

 - - d C A L

Press key 3 <2 sec. to go back to the **main weigher display**.

The following screen is visible.

There are two recalls available. Parameters back to factory, or an erase of the file system. Use the erase function only when a normal recall does not solve the problem.

To set all parameters back to factory settings Press key 3 >2 sec

The device will reboot.

To reset the file system Press key 1 >2 sec.

The following screen is visible. Confirm by pressing key 3 >2 sec.

The device will reboot.

MANUAL SGM800

Starting at firmware version 1.6.0.9.0.3 a backup of the device configuration can
be made within the device. A password is required for the backup.
Contact PENKO for this password.
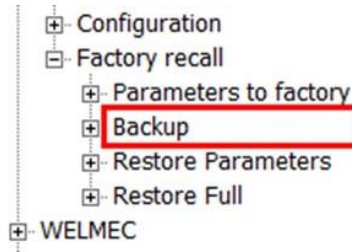

The backup can only be made using Pi Mach II manage. Enter the password in the
service code field.

The backup can be made in the Factory Recall menu.

Restore Parameters only restores the non-certified parameters. This option is also
available in the device menu, RCL menu, option RCL 2.

Restore Full restores all parameters. This option is also available in the de- vice menu,
RCL menu, option RCL 3.

The device restarts after a restore action.

3.1.19 Menu -SoF-
SoF   Firmware update

In **SoF**, you can set the SGM800 in boot mode for software update.

Press key 2 <2 sec to enter Boot mode.

The following screen is visible:

Press key 3 >2 sec to set the SGM800 in Boot mode.

4 Firmware update

Connect the SGM to the computer through USB. Start PI Mach II. Set communi- cation to USB.

PIMach2.exe

Start the Firmware Update Manager.
Click Open and select the PIP file.
Click Search For Devices and select the device with source "0".

Use double click or the arrow button to put the address in the Destination List and click OK.
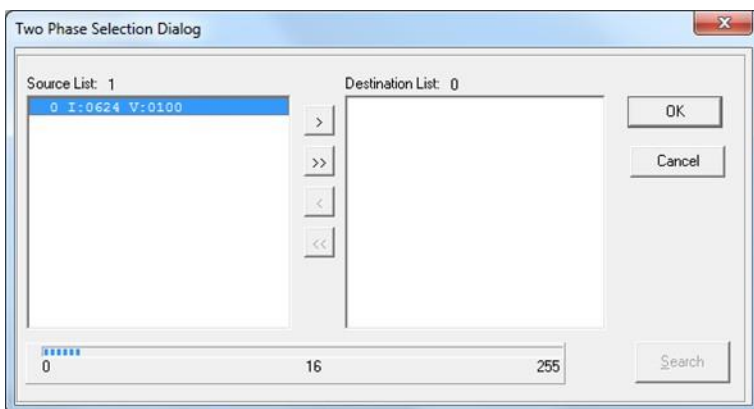

MANUAL SGM800

Go into the configuration menu by pressing key 3 >2 sec. The following screen will appear:

Go to **- - - SoF** by pressing key 1 <2 sec until you see **- - - SoF**

Press key 2 <2 sec to enter Boot mode.

The following screen is visible:

Press key 3 >2 sec to set the SGM800 in Boot mode.

Now click Firmware Update to start the update.
The SGM will reboot automatically and the Firmware Update Manager will show Updated.

Device	Id-code	Softw Version	Status
☑ 0 -		0624 V:0100	Updated

MANUAL SGM800
5   Event Log

Event Log automatically records various system events like Software Updates and Calibrations. Event Logs can be viewed via Pi Mach II Manage:
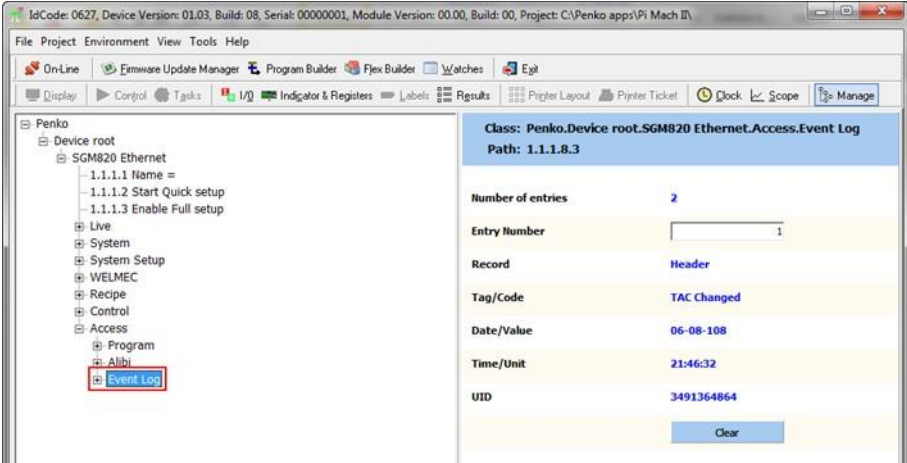

How you can connect your SGM800 to PI Mach II Manage is explained in chapter 3 of this manual. Enter the Event number at "Entry Number" and confirm with Enter or the Apply button. The event is shown.

In this example you can see that Entry 11 is a Calibration change on February 1st 2014 at 12:19:52 and it test the Unique Identification Code (UID) 158334

9770.

Events can only be printed with the SGM850 Serial. Pressing the button will erase the

complete Event log memory.

6 Alibi Memory

The SGM800 has a Alibi Memory function inside. This saves information about Dosed weight of the SGM800 MFL, checked weight of the SGM800 CHK and actual weigher value of the SGM800 Indicator. In the SGM800 Belt the Alibi Memory has no function. The Alibi memory can be viewed via Pi Mach II Manage:

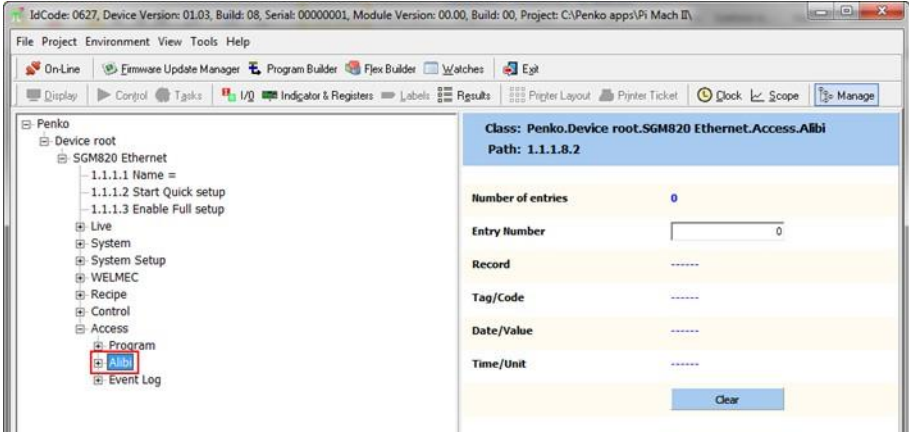

How you can connect your SGM800 to PI Mach II Manage is explained in chapter 3 of this manual.
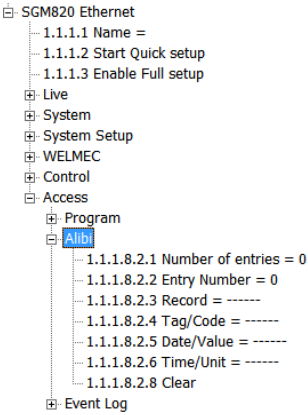

Events can only be printed with the SGM850 Serial.
GM800 Indicator Alibi Memory. An input can be programmed as PRINT command. Every time the PRINT command is executed, the current weigher value is written to the Alibi Memory.
MANUAL SGM800

Enter the Alibi number at "Entry Number" and confirm with Enter or the Apply but- ton.
The Alibi data is shown.
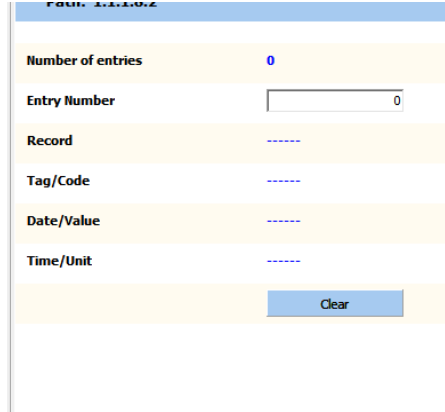

It shows the weigher value that is saved with the time and date it is saved on.

Events can only be printed with the SGM850 Serial.

Pressing the ⬜ Clear button will erase the complete alibi memory.

6.1 SGM800 Controller CHK Alibi Memory

In the SGM800 CHK the Alibi Memory can be enabled in the configuration.

For more information about the configuration please check the SGM800 Check weigher manual supplement.

To get the Alibi information enter the Alibi number at "Entry Number" and confirm with Enter or the Apply button. The Alibi data is shown.

It shows the checked weight that is saved with the time and date it is saved on.

Events can only be printed with the SGM850 Serial.

Pressing the [Clear] button will erase the complete alibi memory.

6.2 SGM800 Controller MFL Alibi Memory

In the SGM800 MFL the Alibi Memory can be enabled in the configuration.

For more information about the configuration please check the SGM800 Mono Filler manual supplement.

To get the Alibi information enter the Alibi number at "Entry Number" and confirm with Enter or the Apply button. The Alibi data is shown.

It shows the dosed weight that is saved with the time and date it is saved on.

Events can only be printed with the SGM850 Serial.

Pressing the [Clear] button will erase the complete alibi memory.

7   Error Codes

Error Code	Description	Solution
2001	Parameter error	Invalid entry, choose a valid value
2005	Input value is not valid	Invalid entry, choose value within range
2101	Weigher not stable	Wait for stable weigher signal and try again
2102	Parameter exceeds maxload	Remove load from scale
2103	Parameter below zero	Check if scale is blocked
2104	Not in zero range	Remove load
2105	Arithmetic overflow occurred	Change calibration levels
2106	A/D reads all 1's	Check load cell connection
2107	A/D reads all 0's	Check load cell connection
2108	Gain ref. < zero ref.	Change calibration levels
2109	Gain > 0.99984741211	Change calibration levels
2110	Save error	Contact PENKO
2111	Flash ROM exhausted	Contact PENKO
2112	Error on header creation	Contact PENKO
2113	Error on date write	Contact PENKO
2114	Header validation failed	Contact PENKO
2115	De-active old data fail	Contact PENKO
2116	Load errors	Contact PENKO
2117	Item not found in store	Contact PENKO
2118	Error in stored data	Contact PENKO

About PENKO

At PENKO Engineering we specialize in weighing. Weighing is inherently chemically correct, independent of consistency, type or temperature of the raw material. This means that weighing any kind of material guaranties consistency and thus, it is essential to sustainable revenue generation in any industry. As a well-established and proven solution provider, we strive for the ultimate satisfaction of custom design and/or standard applications, increasing your efficiencies and saving you time, saving you money.

Whether we are weighing raw materials, components in batching, ingredients for mixing or dosing processes, - or weighing of static containers and silos, or - in-motion weighing of railway wagons or trucks, by whatever means required during a process, we are essentially forming vital linkages between processes and businesses, anywhere at any time. We design, develop and manufacture state of the art technologically advanced systems in accordance with your strategy and vision. From the initial design brief, we take a fresh approach and a holistic view of every project, managing, supporting and/or implementing your system every step of the way. Curious to know how we do it? www.penko.com

Certifications

PENKO sets high standards for its products and product performance which are tested, certified and approved by independent expert and government organizations to ensure they meet – and even – exceed metrology industry guidelines. A library of testing certificates is available for reference on:
www.penko.com/nl/publications_certificates.html

PENKO Professional Services

PENKO is committed to ensuring every system is installed, tested, programmed, commissioned and operational to client specifications. Our engineers, at our weighing center in Ede, Netherlands, as well as our distributors around the world, strive to solve most weighing-system issues within the same day. On a monthly basis PENKO offers free training classes to anyone interested in exploring modern, high-speed weighing instruments and solutions. Training sessions on request: www.penko.com/training
